

Assignment – 2

Student Name	S.Kaviyaran
Student Roll Number	821719104016
Maximum mark	2 marks

Question 1:

Build a python code, Assume u get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.

Solution:

```
import random
temperature=random.randint(1,100)
print("temperature level",temperature)
humidity=random.randint(1,100)
print("humidity level",humidity)
if temperature in range(1,45,1):
    print(" low temperatures ")
    print("alaram is off")
elif temperature in range(46,100,1):
    print("high temperature")
    print("alaram is on")
if humidity in range(1,60,1):
    print("the humidity is normal")
else:
    print("the humidity is high")
```

```
